

**(Tip-9-2) 重なり積分・分子コア積分・交換積分 F の核座標による微分**

原子核 A の座標を  $(x_A, y_A, z_A)$  として、 $a, b, c, d, S$  が A であるかどうかに注意すると、以下の如くなる。

**(i)  $\exp Aab$  の微分**

$$\begin{aligned} \partial/\partial x_A \exp Aab &= \partial/\partial x_A \exp(-sR_{ab}^2) = \exp(-sR_{ab}^2) \cdot 2sR_{ab} \cdot (x_a - x_b) / R_{ab} \\ &= \exp(-sR_{ab}^2) \cdot 2\alpha \triangle_{x_a} && (\text{for } a=A : a \text{ が } A \text{ に属する}) \\ \partial/\partial x_A \exp Aab &= \exp(-sR_{ab}^2) \cdot 2\beta \triangle_{x_a} && (\text{for } b=A : b \text{ が } A \text{ に属する}) \end{aligned}$$

**(ii)  $\triangle$  の微分**

$$\begin{aligned} \partial/\partial x_A \triangle_{x_a} &= \partial/\partial x_A (x_p - x_a) = \partial/\partial x_A (\beta/p) (x_b - x_a) = \alpha/p - 1 \\ \partial/\partial x_A \triangle_{x_b} &= \partial/\partial x_A (x_p - x_b) = \partial/\partial x_A (\beta/p) (x_b - x_a) = \alpha/p \\ \partial/\partial x_B \triangle_{x_b} &= \partial/\partial x_B (x_p - x_b) = \partial/\partial x_B (\alpha/p) (x_b - x_a) = \beta/p - 1 \\ \partial/\partial x_B \triangle_{x_a} &= \partial/\partial x_B (x_p - x_a) = \partial/\partial x_B (\alpha/p) (x_b - x_a) = \beta/p \end{aligned}$$

**(iii)  $\nabla$  の微分**

$$\begin{aligned} \partial/\partial x_A \nabla_{x_p} &= \partial/\partial x_A (x_p - x_s) = \begin{cases} \alpha/p & \text{for } s \neq A \\ \alpha/p - 1 & \text{for } s = A \end{cases} \\ \partial/\partial x_A \nabla_{x_{pq}} &= \partial/\partial x_A (x_p - x_q) = \begin{cases} \alpha/p + \beta/p - \gamma/q - \delta/q & \text{for } a = b = c = d = A \\ 0 & \text{for } a \neq A \ \& \ b \neq A \ \& \ c \neq A \ \& \ d \neq A \end{cases} \end{aligned}$$

**(iv)  $F_0$  の微分**

(a) 重なり積分  $\langle F_0(X) = 1 \rangle$

$$\partial/\partial x_A F_0(X) = \partial F_0(X) / \partial X \cdot \partial X / \partial x_A = 0$$

(b) コア積分 2  $\langle F_0(X) = 3 - 2sR_{ab}^2 \rangle$

$$\begin{aligned} \partial/\partial x_A F_0(X) &= \partial F_0(X) / \partial X \cdot \partial X / \partial x_A \\ &= 2\alpha \cdot \triangle_{x_A} F_1 \end{aligned}$$

(c) コア積分 1  $\langle F_0(X) = F_0(p^{1/2}R_s) \rangle$

$$\begin{aligned} \partial/\partial x_A F_0(X) &= \partial F_0(X) / \partial X \cdot \partial X / \partial x_A \\ &= \begin{cases} (\alpha/p - 1) \cdot 1/(2p) \nabla_{x_p} F_1 & \text{for } s = A \\ \alpha/p \cdot 1/(2p) \nabla_{x_p} F_1 & \text{for } s \neq A \end{cases} \end{aligned}$$

(c) 交換積分  $\langle F_0(X) = F_0((pq/(p+q))^{1/2}R_{pq}) \rangle$

$$\partial/\partial x_A F_0(X) = \begin{cases} \{\alpha/p + \beta/p - \gamma/q - \delta/q\} \cdot 1/(2p) \nabla_{x_{pq}} F_1 & \text{for } a = b = c = d = A \\ \alpha/p \cdot 1/(2p) \nabla_{x_{pq}} F_1 & \text{for } a = A, b \neq A, c \neq A, d \neq A \\ (-\gamma/q) \cdot 1/(2p) \nabla_{x_{pq}} F_1 & \text{for } c = A, a \neq A, b \neq A, d \neq A \end{cases}$$
